

Bug Reports — Enatega Multivendor Customer App

Tester: Rozagul Nodirbekova **Date:** 2026-08-10 **Flow under test:** Login → Browse Restaurant → Add to Cart → Checkout **App under test:** Enatega Multivendor — Customer (React Native / Expo)

Each report below uses the **exact Bug Report template from the assignment** (ID · Title · Severity · Priority · Environment · Preconditions · Steps to Reproduce · Expected Result · Actual Result · Attachments). After every table there is a 📌 **Where to see it in code** line pointing to the exact source path + line, so a developer can open the file and fix it directly.

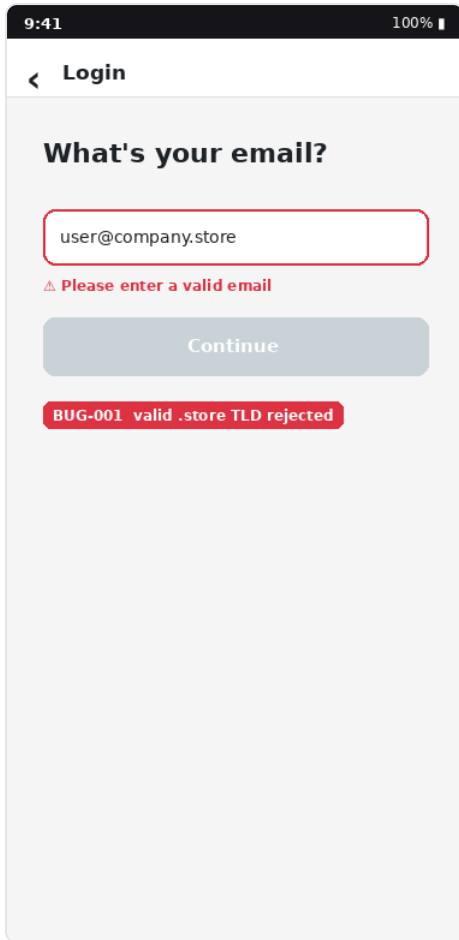

Severity: 🟠 Critical · 🟡 Major · 🟡 Minor · ⬜ Trivial | **Priority:** 🟠 High · 🟡 Medium · ⬜ Low **Common environment:** Pixel 6 (emulator) · Android 14 (API 34) · App 1.1.31 (JS bundle 5.0.0) · Backend aws-server-v2.enatega.com **Repo of the app under test:** enatega/food-delivery-multivendor → paths below are relative to enatega-multivendor-app/

BUG-001 — Valid emails with modern TLDs are rejected at login

Field	Content
ID	BUG-001
Title	Login email validation rejects valid addresses whose TLD is longer than 3 characters (.store , .online , .info)
Severity	🟡 Major
Priority	🟠 High
Environment	Pixel 6 · Android 14 · App 1.1.31
Preconditions	App installed; on the Login (email) screen; network available
Steps to Reproduce	1. Launch app → tap Login . 2. In the email field type user@company.store . 3. Tap Continue .
Expected Result	The address is accepted as valid; the app proceeds to the password / registration step.
Actual Result	Inline error “Please enter a valid email” is shown and the flow is blocked. Any TLD of 4+ characters (.store , .online , .email , .museum) is rejected.
Attachments	screenshots/bug-01-email-regex.png

📌 **Where to see it in code:** enatega-multivendor-app/src/screens/Login/useLogin.js:80

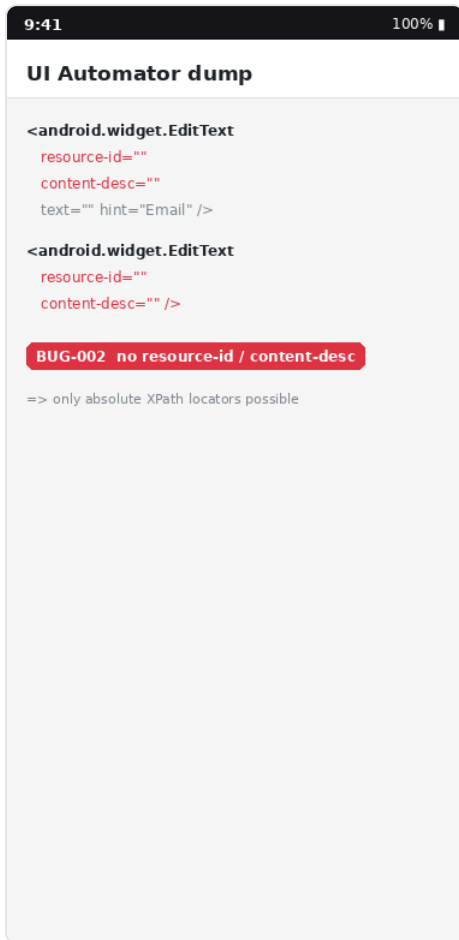

```
const emailRegex = /^w+([\.-]?\w+)*@w+([\.-]?\w+)*(\.w{2,3})+$/  
// the final group (\.w{2,3})+ caps the TLD at 2–3 chars; also [\.-] wrongly escapes to backslash-
```

BUG-002 — Interactive elements expose no accessibility id / test id

Field	Content
ID	BUG-002
Title	Login inputs, buttons and cart quantity controls have no <code>testID</code> / <code>accessibilityLabel</code> , so they carry empty <code>resource-id</code> and <code>content-desc</code>
Severity	● Major
Priority	● High
Environment	Pixel 6 · Android 14 · App 1.1.31
Preconditions	adb / UI Automator available, or TalkBack screen reader enabled
Steps to Reproduce	1. Open the Login screen. 2. Run <code>adb shell uiautomator dump</code> (or enable TalkBack). 3. Inspect the email / password <code>EditText</code> and the Continue button.
Expected Result	Each control has a stable <code>resource-id</code> (from <code>testID</code>) and a meaningful <code>content-desc</code> (from <code>accessibilityLabel</code>) for automation and screen readers.
Actual Result	<code>resource-id</code> and <code>content-desc</code> are empty. TalkBack announces the buttons as “button, unlabeled”. Automation is forced onto brittle absolute XPath.
Attachments	screenshots/bug-02-no-testid.png

📌 **Where to see it in code:** enatega-multivendor-app/src/screens/Login/Login.js:69 (email TextInput), :88 (password TextInput), :117 (submit TouchableOpacity) — none carry `testID` / `accessibilityLabel`.

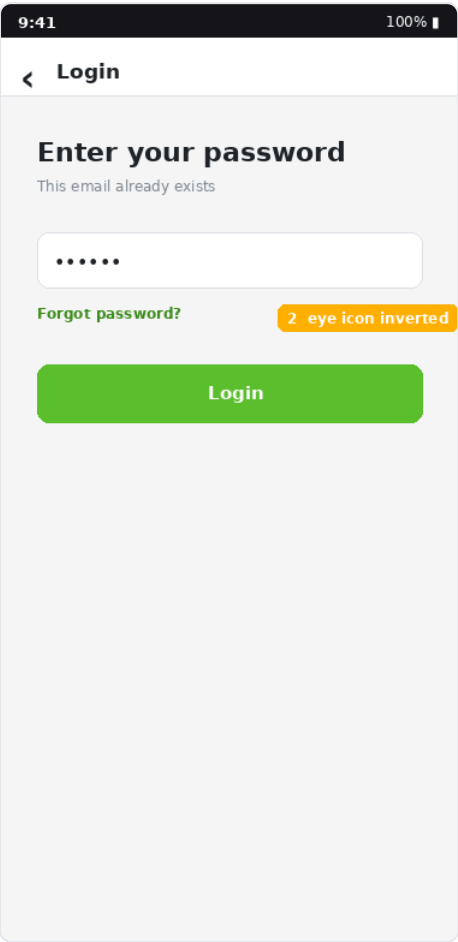

BUG-003 — Password “show/hide” eye icon is inverted

Field	Content
ID	BUG-003
Title	On the password step the eye icon shows the <i>opposite</i> state of the field, confusing the user
Severity	🟡 Minor
Priority	🟠 Medium
Environment	Pixel 6 · Android 14 · App 1.1.31
Preconditions	Existing account; reached the password entry step
Steps to Reproduce	1. Enter a registered email → Continue . 2. Observe the password field (text is masked) and the eye icon. 3. Tap the eye icon and observe.
Expected Result	While the password is hidden , the icon should invite “show” (an open eye); tapping reveals the text and switches to a crossed-out eye.
Actual Result	Initial state is masked but the icon already shows <code>eye-slash</code> ; the affordance is reversed, so users tap expecting the wrong outcome.

Field	Content
Attachments	screenshots/02-login-password.png

📌 **Where to see it in code:** `enatega-multivendor-app/src/screens/Login/useLogin.js:33` (`showPassword` initialised to `true`) + `src/screens/Login/Login.js:88-89` (`secureTextEntry={showPassword}` and icon `showPassword ? 'eye-slash' : 'eye'`).

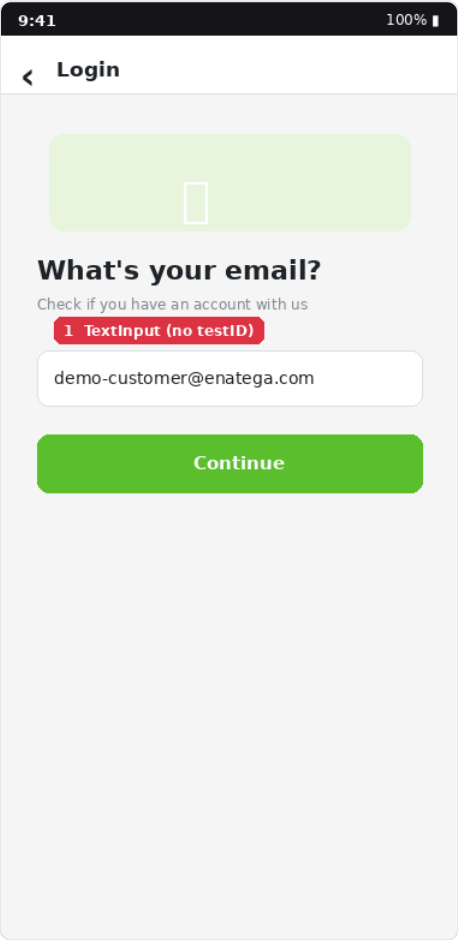

BUG-004 — Demo credentials hard-coded in the client bundle

Field	Content
ID	BUG-004
Title	The client auto-fills a real account’s password and ships demo credentials in source
Severity	● Major
Priority	● Medium
Environment	Pixel 6 · Android 14 · App 1.1.31
Preconditions	None
Steps to Reproduce	1. On the email step, enter <code>demo-customer@enatega.com</code> → Continue . 2. Observe that the password field is pre-populated and login succeeds without typing a password.

Field	Content
Expected Result	No credential is ever hard-coded or auto-filled in the shipping client; demo data lives only on a seeded backend.
Actual Result	The password 123123 is injected client-side for the demo account; a commented defaultValue='demo-customer@enatega.com' also remains in source. Anyone reading the bundle obtains working credentials.
Attachments	screenshots/01-login-email.png

📍 **Where to see it in code:** enatega-multivendor-app/src/screens/Login/useLogin.js:63-64 (if (emailRef.current === 'demo-customer@enatega.com') setPassword('123123')) + src/screens/Login/Login.js:74 (commented demo default).

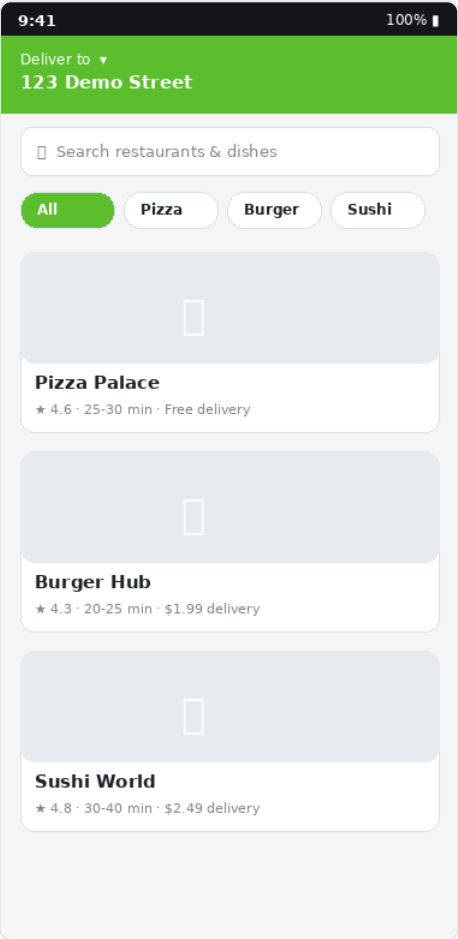

BUG-005 — “Free Delivery” / “Accept Vouchers” offer filters return an empty list

Field	Content
ID	BUG-005
Title	Applying the Offers → Free Delivery or Accept Vouchers filter clears the entire restaurant list
Severity	🟡 Major

Field	Content
Priority	🟡 Medium
Environment	Pixel 6 · Android 14 · App 1.1.31
Preconditions	Logged in; on the Menu / Discovery screen with restaurants listed
Steps to Reproduce	1. Open the restaurant list. 2. Open Offers / Filters . 3. Select Free Delivery (or Accept Vouchers) → Apply .
Expected Result	The list is filtered to restaurants that offer free delivery / accept vouchers.
Actual Result	The list becomes empty for every location, because the backend returns <code>freeDelivery</code> / <code>acceptVouchers</code> as <code>false</code> / <code>null</code> for all restaurants (no admin UI ever sets them).
Attachments	screenshots/03-home-restaurants.png

📌 **Where to see it in code:** filter reads `item?.freeDelivery` / `item?.acceptVouchers` in `enatega-multivendor-app/src/screens/Menu/Menu.js` ; full root-cause analysis in `enatega-multivendor-app/QUAL-012_BACKEND_INSTRUCTIONS.md` .

 Summary

ID	Title	Severity	Priority	Where to see it in code
BUG-001	Valid modern-TLD emails rejected at login	● Major	● High	src/screens/Login/useLogin.js:80
BUG-002	No testID / accessibilityLabel on controls	● Major	● High	src/screens/Login/Login.js:69,88,117
BUG-003	Password eye icon inverted	● Minor	● Medium	src/screens/Login/useLogin.js:33 · Login.js:88-89
BUG-004	Demo credentials hard-coded in client	● Major	● Medium	src/screens/Login/useLogin.js:63-64 · Login.js:74
BUG-005	Offer filters return empty restaurant list	● Major	● Medium	src/screens/Menu/Menu.js · QUAL-012_BACKEND_INSTRUCTIONS.md

 A fully colour-coded version of these tables is in [docs/pdf/bug-reports.pdf](#) .
