

Test Cases — “Add to Cart” Feature

Feature: Add to Cart (Restaurant → Item → Cart) **Tester:** Rozagul Nodirbekova **Date:** 2026-08-10 **App:** Enatega Multivendor Customer 1.1.31 · Android 14 · Backend `aws-server-v2.enatega.com`

Coverage: 4 positive · 3 negative · 3 edge = **10 cases** Priority legend —

High

Medium

Low

Global preconditions (unless noted): user logged in as `demo-customer@enatega.com`, a restaurant is **open**, network available, cart initially empty.

ID	Type	Description	Preconditions	Steps	Expected Result	Priority
TC-001	✓ Positive	Add a single available item to an empty cart	On a restaurant menu; cart empty	1. Open “Pizza Palace”. 2. Tap Margherita Pizza . 3. Tap Add to Cart . 4. Open the cart.	Item appears in cart with qty 1 , correct name & price \$8.50 ; cart badge shows 1 ; subtotal = item price.	● High
TC-002	✓ Positive	Increase quantity of an item from the item detail stepper	On item detail of Margherita Pizza	1. Tap + on the quantity stepper twice (qty = 3). 2. Tap Add to Cart . 3. Open cart.	Cart shows Margherita Pizza qty 3 ; line total = $3 \times \$8.50 = \25.50 ; subtotal updates accordingly.	● High
TC-003	✓ Positive	Add two different items from the same restaurant	On “Pizza Palace” menu; cart empty	1. Add Margherita Pizza . 2. Go back, add Pepperoni Pizza . 3. Open cart.	Cart lists both items with correct individual prices; subtotal = sum of both; item count = 2.	● High
TC-004	✓ Positive	Cart persists after backgrounding the app	Item already in cart	1. Add an item. 2. Background the app (Home), wait 30 s. 3. Re-open the app.	Cart still contains the item with the same qty and price; nothing is lost.	● Medium
TC-005	⊖ Negative	Add item from a different restaurant while a cart exists	Cart already has an item from “Pizza Palace”	1. Go to “Burger Hub”. 2. Add Cheeseburger . 3. Observe the prompt.	App warns that a new cart will replace the current one and asks to confirm (Clear & add / Cancel); cart integrity is preserved — no silent mixing of two restaurants.	● High

ID	Type	Description	Preconditions	Steps	Expected Result	Priority
TC-006	⊖ Negative	Add an out-of-stock / unavailable item	Menu shows an item marked <i>Unavailable</i>	1. Locate an unavailable item. 2. Attempt to tap Add to Cart .	The Add button is disabled (or a clear “Currently unavailable” message shows); item is not added; cart unchanged.	● Medium
TC-007	⊖ Negative	Add to cart while offline	Item detail open; then disable network	1. Enable Airplane mode. 2. Tap Add to Cart .	A clear connectivity error is shown and the cart is not silently corrupted; on reconnect the action can be retried.	● Medium
TC-008	◆ Edge	Decrease quantity to 0 from the cart	Cart has one item, qty 1	1. Open cart. 2. Tap - on the item until qty reaches 0.	Item is removed and a confirmation/undo appears; if it was the last item the empty-cart state is shown; no negative quantities.	● Medium
TC-009	◆ Edge	Add a very large quantity of one item	On item detail	1. Increase quantity to 99 . 2. Tap Add to Cart . 3. Open cart.	Quantity is capped at a sane maximum (or accepted with correct math); line total = qty × price with no overflow/ NaN ; UI stays aligned.	● Low
TC-010	◆ Edge	Add an item with required customisation without selecting options	Item has a mandatory option group (e.g. size)	1. Open the customisable item. 2. Tap Add to Cart without choosing the required option.	App blocks the add and highlights the required option group with a message; item is not added until a valid selection is made.	● Medium

Traceability

Test Case	Verifies / relates to
TC-005	Single-restaurant cart rule (common food-delivery constraint)
TC-006, TC-007	Robustness — unavailable item & offline handling
TC-008, TC-009	Quantity boundary behaviour
TC-010	Required-modifier validation
